

EXTENSION® is a workflow, communication and device integration engine that provides easy to use programming tools designed for fast and easy implementations of medical data workflows. It allows you to view your disparate clinical information on the web-enabled mobile devices of your choice, and to automate workflows based on your business needs.

EXTENSION® can be used for:

- **Interfacing** – Use **EXTENSION®** as the interface engine for all your medical applications and eliminate the 1:1 interfacing necessary to exchange data from one database to another.
- **Data Mobility** – With **EXTENSION®** as your central platform, you can set up interfaces that allow any data stored in **EXTENSION®** to be displayed on the web-enabled mobile devices of your choice.
- **Workflow Automation** – Automate your workflows such as call-ahead patient and clinician notifications, imports and exports of patient data between systems, phone call routing, and chart pop-up based on caller ID – based on your own business rules.
- **Communications** – Call ahead notification services, secure clinical messaging and integration with your Cisco Unified Communications and Microsoft Exchange.

If you are looking to integrate your Cisco Unified Communications with your Centricity® EMR and PM, **EXTENSION®** is the solution. Contact us today for a free demonstration.
